COLOR CHART PG. 67

Nicolock sources the highest class of raw materials in the industry to give each paver the very best in quality and consistency. Our patented process features a smooth, ultra-dense surface and rich vibrant color guaranteed not to fade.

Our unique, state-of-the-art manufacturing process ensures that all of our quality materials are precisely measured out to create a consistent, extremely durable base mix which is the foundation of every Nicolock paver.

During this process, iron oxide bonds with cement molecules resulting in the most vibrant color seen throughout each paver.

Once our base mix is created, ultra-fine sand, Portland cement and additional color come together to create our paver-shield™ technology.

The result is a tight, smooth surface texture combined with superior color, strength and beauty that will last for generations!

SEE THE DIFFERENCE

paver-shield™ Technology
tight, smooth surface texture that
is built into the paver.

Ultra dense base mix featuring
color throughout the paver
ensuring a lifetime of beauty.

NICOLOCK

paver-**shield**™

An investment to last a lifetime.

WITHOUT Nicolock paver-**shield**™

As pavers without paver-**shield**™ wear, the thin veneer and color tint exposes aggregate over time making them appear faded.

WITH Nicolock paver-**shield**™

Pavers with paver-**shield**™ have a tight, smooth surface texture and will not expose heavy aggregate as they wear.

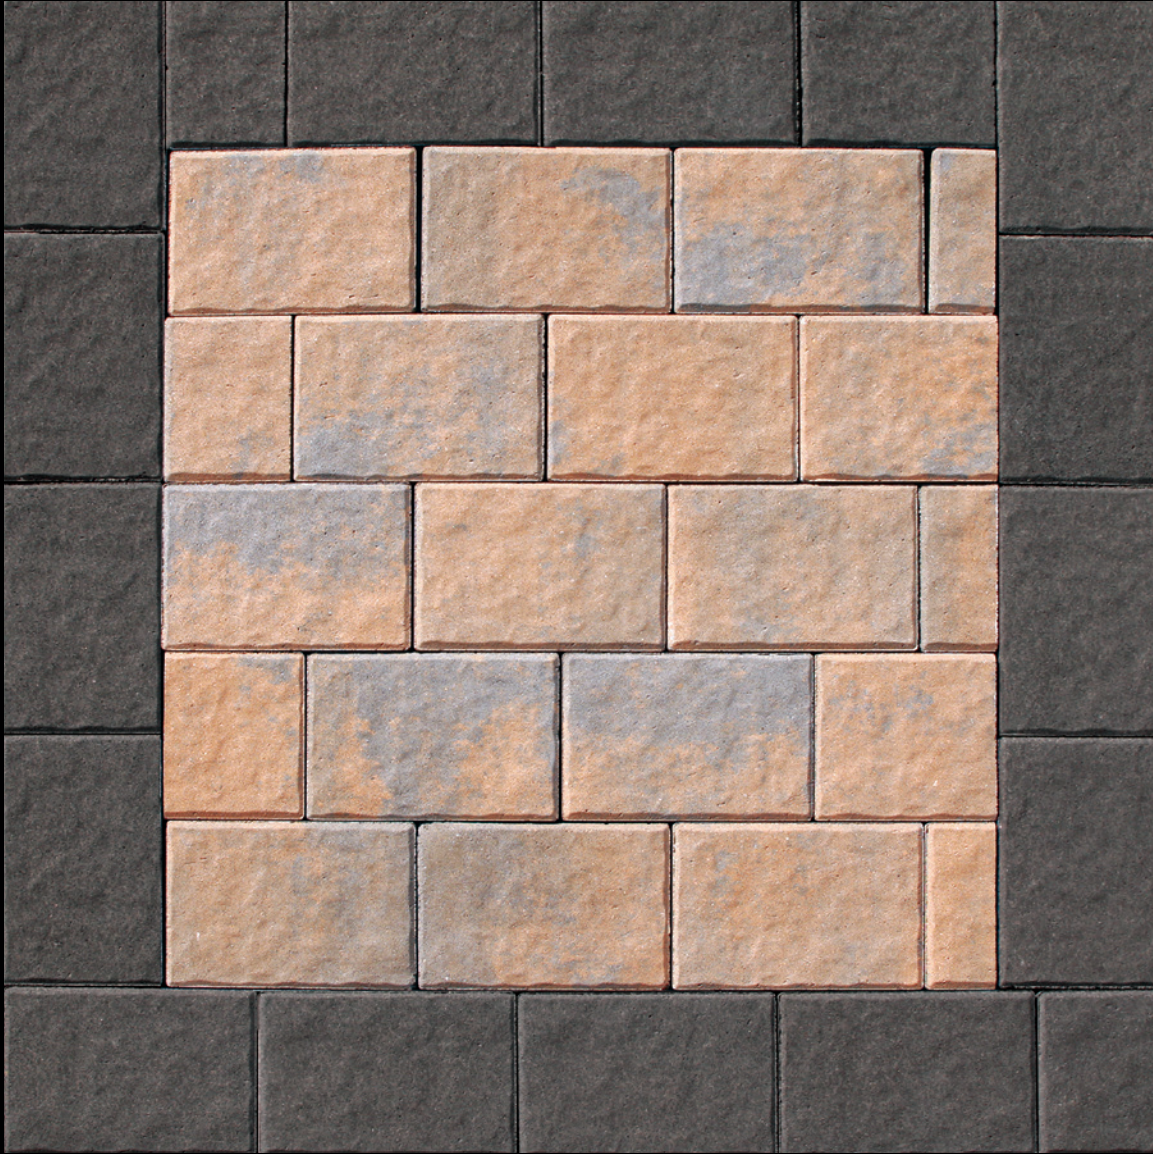

Ultra-dense surface has more color and more protection. Nicolock has color from top to bottom throughout the paver ensuring a lifetime of beauty. Iron oxide pigments are **GUARANTEED** not to fade!

The color illustrations in this book are as accurate as photography and printing processes allow. Final selection of colors should be made from several physical samples. Shade variations are inherent in colored concrete products using natural materials. Delivered product can vary slightly from physical samples.

Color descriptions denoted in **Yellow** utilize Nicolock's unique colors and blends.

Using color, inlays, borders and paving stone direction to ENHANCE YOUR OUTDOOR SPACE

Creating that WOW factor is easy to achieve when you incorporate Nicolock's design fundamentals into your project. Add a beautiful border when you are designing your new patio, poolscape, driveway or any outdoor project. Create a striking visual by using contrasting colors and different shaped paving stones. There are many options when considering with regard to paver laying patterns. We have chosen a few examples of laying patterns on the next few pages to help guide you through the process. You can even mix and match different styles, shapes and patterns to create unique and interesting designs.

90° traditional

PAVER DIRECTION

Laying pavers at a 45 degree angle creates the illusion of space with an added richness to a basic installation.

45° with border

BORDERS

Borders define edges and softly combine large areas that would otherwise be toneless. Monochromatic or contrasting colors help define your style.

45° with inlay

INLAYS

Inlays allow you to define a space within your outdoor space. Often created with contrasting colors and textures, inlays add visual interest to make your space.
